Trends in News Consumption: 1991-2012

In Changing News Landscape, Even Television Is Vulnerable

The transformation of the nation's news landscape has already taken a heavy toll on print news sources, particularly print newspapers. But there are now signs that television news – which so far has held onto its audience through the rise of the internet – also is increasingly vulnerable, as it may be losing its hold on the next generation of news consumers.

Online and digital news consumption, meanwhile, continues to increase, with many more people now getting news on cell phones, tablets or other mobile platforms. And perhaps the most dramatic change in the news environment has been the rise of social networking sites. The percentage of Americans saying they saw news or news headlines on a social networking site yesterday has doubled – from 9% to 19% – since 2010. Among adults younger than age 30, as many saw news on a social networking site the previous day (33%) as saw any television news (34%), with just 13% having read a newspaper either in print or digital form.

These are among the principal findings of the Pew Research Center's biennial news consumption survey, which has tracked patterns in news use for nearly two decades. The latest survey was conducted May 9-June 3, 2012, among 3,003 adults.

The proportion of Americans who read news on a printed page – in newspapers and magazines – continues to decline, even as online readership has offset some of these losses. Just 23% say they read a print newspaper yesterday, down only slightly since 2010 (26%), but off by about half since 2000 (47%).

Digital News Surpasses Newspapers, Radio

Where did you get news yesterday?

PEW RESEARCH CENTER 2012 News Consumption Survey.

The decline of print on paper spans beyond just newspapers. The proportion reading a magazine in print yesterday has declined over the same period (26% in 2000, 18% today). And as email, text messaging and social networking become dominant forms of communication, the percentage saying they wrote or received a personal letter the previous day also has fallen, from 20% in 2006 to 12% currently. There has been no decrease in recent years in the percentage reading a book on a typical day, but a growing share is now reading through an electronic or audio device.

While print sources have suffered readership losses in recent years, television news viewership has remained more stable.

Currently, 55% say they watched the news or a news program on television yesterday, little changed from recent years. But there are signs this may also change. Only about a third (34%) of those younger than 30 say they watched TV news yesterday; in 2006, nearly half of young people (49%) said they watched TV news the prior day. Among older age groups, the percentages saying they watched TV yesterday has not changed significantly over this period.

Just a Third of Young People Watched Any TV News Yesterday

<i>Watched news on television yesterday ...</i>	2006	2012	Change
	%	%	
Total	57	55	-2
18-29	49	34	-15
30-49	53	52	-1
50-64	63	65	+2
65+	69	73	+4

PEW RESEARCH CENTER 2012 News Consumption Survey, Q13.

The changing demographics of the TV news audience are particularly noticeable in the audiences for local and cable news. The overall share of Americans saying they regularly watch local television news has slipped from 54% in 2006 to 48% today – and in that regard it remains one of the news sources with the broadest reach. But the number of 18-to-29 year-olds regularly watching local news has fallen from 42% in 2006 to 28% today.

Local TV News Viewing Declines, Particularly among Young People

<i>Regularly watch ...</i>	2006	2008	2010	2012	06-12 change

50-64	39	42	42	34	-5
65+	38	44	50	51	+13

PEW RESEARCH CENTER 2012 News Consumption Survey. Q41b,k.

Over this same period, the regular audience for cable news also has aged. In 2006 and 2008, there were only modest age differences in regular cable news viewership. But in the current survey, more than twice as many of those 65 and older as those younger than 30 say they regularly watch cable news (51% vs. 23%).

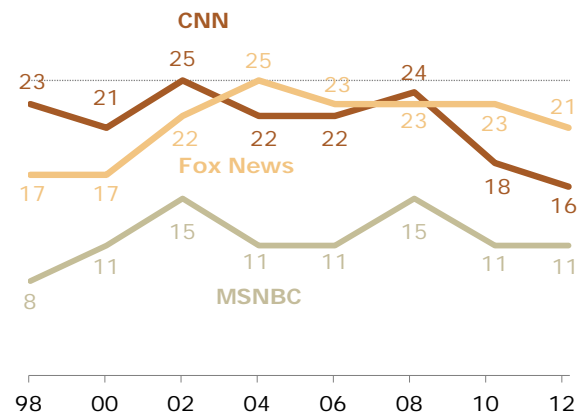

CNN's Losses Continue

Among individual cable news outlets, CNN's regular audience has declined since 2008. Four years ago, nearly a quarter of Americans (24%) said they regularly watched CNN; that has fallen to 16% in the new survey.

Regular viewership for both Fox News and MSNBC has not changed much in recent years. About one-in-five Americans (21%) say they regularly watch Fox News, while about half as many (11%) say they regularly watch MSNBC.

CNN Viewership Lower than in 2008; Fox and MSNBC Hold Steady

% who regularly watch...

PEW RESEARCH CENTER 2012 News Consumption Survey. Q41g-i.

Print on Paper: Going, Going ...

While Americans enjoy reading as much as ever – 51% say they enjoy reading a lot, little changed over the past two decades – a declining proportion gets news or reads other material on paper on a typical day. And there is new evidence in the survey of a shift in reading to electronic platforms.

In the new survey, only 29% say they read a newspaper yesterday, with just 23% reading a print newspaper. Over the past decade, the percentage reading a print newspaper has fallen by 18 points (from 41% to 23%).

Somewhat more (38%) say they *regularly* read a daily newspaper, although this percentage also has declined, from 54% in 2004. Figures for newspaper readership may not include some people who read newspaper content on sites that aggregate news content, such as Google News or Yahoo News.

Fewer Reading, Writing on Paper

% who did this yesterday ...	2002	2006	2012	02-12 Change
Read a print newspaper	41	38	23	-18
Read a print magazine	23	24	17	-6
Read a book in print	34	38	30	-4
Wrote or received a personal letter	--	20	12	--

PEW RESEARCH CENTER 2012 News Consumption Survey. Q9, Q11, Q28, Q30, Q37f.

Over the past decade, there have been smaller declines in the percentages of Americans reading a magazine or book in print (six points and four points, respectively) than for newspapers.

Just as online newspaper readers make up an ever-greater share of all newspaper readers, so too are more magazine readers and book readers abandoning the printed page for tablets, digital books and other devices. In the current survey, 9% of those who said they read a magazine yesterday, and 20% who read a book, read them in a non-print format.

And substantial percentages of the regular readers of leading newspapers now read them digitally. Currently, 55% of regular New York Times readers say they read the paper mostly on a computer or mobile device, as do 48% of regular USA Today and 44% of Wall Street Journal readers.

By contrast, most readers of such magazines as Harpers, the Atlantic and the New Yorker still read them in print. But even for these magazines, nearly a quarter of regular readers (23%) say they read them mostly on a computer or digital device.

Many Read Leading Newspapers Digitally

<i>Based on regular readers of ...</i>	<i>Read mostly in</i>			N

New York Times	41	55	5=100	174

PEW RESEARCH CENTER 2012 News Consumption Survey. Q90. Based on regular readers. Figures may not add to 100% because of rounding.

Online News: More Mobile, More Social

While traditional news platforms have lost audience, online news consumption has been undergoing major changes as well. Nearly one-in-five Americans (17%) say they got news yesterday on a mobile device yesterday, with the vast majority of these people (78%) getting news on their cell phone. Among smartphone owners, nearly a third (31%) got news yesterday on a mobile device.

The second major trend in online news consumption is the rise of news on social networks. Today, 19% of the public says they saw news or news headlines on social networking sites yesterday, up from 9% two years ago. And the percentage regularly getting news or news headlines on these sites has nearly tripled, from 7% to 20%.

In part, this is a byproduct of the explosive growth in social networking. In the current survey, 41% of all adults, including 47% of online adults, say they used Facebook or another social networking site yesterday. (For more on social networking, see surveys conducted by the [Pew Internet & American Life Project](#).)

More Americans Getting News Digitally and from Social Networks

N	3006	3003		1264	1512	

PEW RESEARCH CENTER 2012 News Consumption Survey. Q82. 2010 asked whether you "got news or news headlines" yesterday on social networking sites. Whites and blacks include only those who are not Hispanic; Hispanics are of any race.

On top of the increase in social network use, the poll finds that news is also more prevalent on social networking sites. The share of users who saw news there yesterday nearly doubled from 19% to 36% between 2010 and 2012.

The increasing use of these sites for news has not just occurred among young people. In fact, those in their 30s are nearly as likely as those 18 to 24 to say they saw news or news headlines on Facebook or another social networking site yesterday (30% vs. 34%). And about a quarter of adults in their 40s (23%) saw news yesterday on social networks, up from just 8% in 2010.

The two trends in online news consumption – growing numbers getting news via mobile devices and the increasing use of social networks – are complementary. Overall, 55% of Americans access the internet on a mobile device, such as a cell phone or tablet; among this group, 30% say they saw news on social networking sites yesterday. That compares with just 9% of Americans who are online but do not access the internet on a mobile device.

Getting News on Twitter

While news gathering is very common among Twitter users, the overall reach is limited because the audience remains relatively small. About one-in-ten Americans (13%) *ever* use Twitter or read Twitter messages. By comparison, more than half (54%) *ever* use other social networking sites, such as Facebook, Google Plus or LinkedIn.

As a result, far fewer people get news on Twitter than on other social networking sites. Just 11% *ever* see news on Twitter, while 3% got news there yesterday. Nearly half of adults (47%) *ever* get news on Facebook and other social networking sites and 19% got news on one or more of those sites yesterday.

Nonetheless, Twitter users are increasingly getting news on the site and sharing news stories with others. Overall, 83% of Twitter users *ever* see news on Twitter and 26% saw news there yesterday; both percentages are up considerably from two years ago. And most Twitter users (59%) tweet or retweet news headlines on Twitter. About the same percentage of users of Facebook and other social networks (61%) use those sites for sharing news or news headlines.

Twitter Not a Major News Source, But More Users See News There

<i>% of public who <u>ever</u> sees news on ...</i>	2010	2012	Change

Ever tweet, retweet news	35	59	+24
Follow news orgs., journalists	24	36	+12
Saw news/news headlines on Twitter yesterday	18	26	+8

PEW RESEARCH CENTER 2012 News Consumption Survey. Q74, Q75, Q76, Q77, Q81.

SECTION 1: WATCHING, READING AND LISTENING TO THE NEWS

Television continues to be the public's top daily news source. In the current survey, 55% say they watched the news or a news program on television yesterday. That is little changed from recent news consumption surveys. In the 1990s, however, far more Americans said they watched television news yesterday.

The percentages saying they listened to radio news and read a newspaper yesterday have steadily declined over the past two decades. Currently, 33% say they listened to radio news, while 29% say they read a newspaper yesterday.

Nearly four-in-ten (39%) got news online or on a mobile device yesterday, including cell phones and tablets. In 2010, 34% got news online; this did not include those who got news on a mobile device. In 2004, just 24% said they got news online during the previous day.

When other online and digital news sources are added in – including seeing news on a social network or Twitter, getting news from email and listening to podcasts – the percentage getting news digitally yesterday approaches the share watching television news (50% vs. 55%). In 2010, 44% got news from one or more digital platforms yesterday.

Where People Got News Yesterday

PEW RESEARCH CENTER 2012 News Consumption Survey. Q9, Q11, Q13, Q17, Q20 Q21, Q70, Q75, Q82, Q87.

Traditional and Digital News Platforms

Despite the rapid growth of digital news, more Americans continue to get news from traditional news platforms than from digital platforms. Seven in ten (71%) say they watched television news, read a print newspaper or listened to radio news yesterday. That compares with 50% who got news from one or more digital platforms.

By wide margins, Americans 50 and older continue to rely more on traditional news sources than digital sources. But the differences are more modest among those 25 to 50. And among the youngest Americans – those younger than 25 – substantially more get news digitally than from traditional news sources (60% vs. 43%).

Moreover, since 2010 there has been a sharp decline in the proportion of Americans who got news yesterday only from a traditional news platform – from 40% then to 33% currently.

Most Americans Still Get News from Traditional News Platforms, Except the Very Young

Where did you get news yesterday?	Total	18-24	25-29	30-39	40-49	50-64	65+

10-12 change in "traditional only"	-7	-10	-12	-5	-16	-4	-2

PEW RESEARCH CENTER 2012 News Consumption Survey. NOTE: People who said they got news from both traditional and digital platforms are counted in both nets. Figures may not add to 100% because of rounding.

[As previous Pew Research news consumption surveys have found](#), a plurality of Americans gets news from both traditional and digital news sources – 38% currently, up from 34% in 2010. And the percentage relying only on digital platforms for news also has increased, from 8% to 12%.

Notably, the falloff in the use of just traditional news sources has not come just among young people. Among those 40 to 49, just 24% say they got news yesterday only from television, print newspapers or radio, down from 40% in 2010. Two years ago, about as many people in this age group said they got news only from traditional platforms yesterday as from both traditional and digital platforms (40% vs. 39%). Today, nearly twice as many of those in their 40s blend digital and traditional sources as get news only from traditional sources (47% vs. 24%).

Many Young People Go Newsless

In spite of an expanding variety of ways to get news, a sizable minority of young people continues to go newsless on a typical day. Fully 29% of those younger than 25 say they got no news yesterday either from digital news platforms, including cell phones and social networks, or traditional news platforms. That is little changed from 33% in 2010.

Older Americans are less likely to go newsless: 19% of those between 25 and 39, and smaller percentages of older age groups, say they got no news yesterday. These figures have changed little over the years.

Young People Continue to Spend Less Time with the News

	-----Average total minutes yesterday-----									
	1994	1996	1998	2000	2002	2004	2006	2008	2010	2012
Total	74	66	65	59	59	72	69	66	70	67
18-29	56	44	48	42	38	45	49	46	45	45
30-39	69	60	53	50	57	70	65	63	68	62
40-49	75	65	65	58	56	73	64	67	74	71
50-64	83	79	69	64	71	82	76	74	81	76
65+	90	88	96	80	81	88	79	84	83	83

PEW RESEARCH CENTER 2012 News Consumption Survey. All averages are estimated based on total time spent watching TV news, reading a print version of the newspaper, listening to news on the radio and getting news online, including online/digital versions of newspapers. Online news added in 2004. In 2004 and earlier, all newspaper reading is assumed to be in print.

Young people also consistently spend less time with the news than do older Americans, which is in part attributable to the relatively large share that gets no news on a typical day. In the current survey, those younger than 30 spent an average of 45 minutes getting news yesterday. Older age groups spent an hour or more with news, on average, with those 65 and older spending an average of 83 minutes with the news yesterday. Age differences in time spent with the news have changed little since the 1990s.

People Spend More Time with TV News than Online/Mobile Sources

While the proportion of Americans who get news from any online or mobile source now rivals the share watching television news, people spend far more time with television news than online news.

On average, television news viewers spent 52 minutes watching TV news yesterday;

fully half (51%) watched television news for an hour or more. Online and mobile news consumers spent 40 minutes on average with news online, and just 30% spent an hour or more. About half (49%) of those who got online or mobile news yesterday spent less than 30 minutes getting news from those sources.

In fact, people spent more time on average getting news from radio than getting news online. And while just 30% of online news consumers spent an hour or more getting news from online and mobile sources, 41% of radio news listeners did so.

TV News Still Has Broadest Reach

	Got news there yesterday %	Time Spent Among Users			
		Hour or more %	30-59 min %	Less than 30 min %	Average (minutes)

PEW RESEARCH CENTER 2012 News Consumption Survey. Q10, Q14, Q17, Q23. Figures may not add to 100% because of rounding.
* Includes online newspapers.

News and Daily Life

Far more older Americans get news on a typical day than engage in a variety of other routine activities. Higher percentages of those 50 and older got news yesterday than visited with family or friends, called a friend or relative just to talk, or watched something other than news on television.

But for young people, news faces stiff competition from a number of other daily pursuits, particularly social networking. Among those younger than 25, as many used Facebook or another social networking site yesterday as got news from all sources combined (76% vs. 71%).

More young people go on social networking sites than watch news or entertainment programs on television; just 40% of those younger than 25 watched something other than news on TV yesterday. Even among those 30 to 49, nearly as many used social networking sites (49%) as watched entertainment television (55%).

Gaming also has become an increasingly popular daily activity. In 2006, 17% played games on a computer or video game console yesterday; in the current survey, 33% say they played a game yesterday on one of these formats or on a mobile device. Among those younger than 30, more played a game yesterday than watched TV news.

News Faces Tough Competition for Young People's Attention

PEW RESEARCH CENTER 2012 News Consumption Survey. Q15, Q16, Q28, Q31, Q37.

Daily and Regular News Consumption

The long-term trends in regular news consumption are generally similar to trends in where people got news yesterday. Among television news sources, the percentage saying they regularly watch local TV news has dipped below 50% for the first time (48%). And the percentage watching cable news channels has fallen five points since 2010 and 2008, from 39% to 34% currently.

The regular audience for nightly network news, which declined markedly through the 1990s, has changed little in recent years. Currently, 27% say they regularly watch the nightly network news on CBS, ABC or NBC. This percentage has not varied by more than a point or two since 2006.

As in previous news consumption surveys, more say they regularly read a newspaper than say they read a newspaper yesterday. Nearly four-in-ten (38%) say they regularly read a daily newspaper, which is largely unchanged since 2010 (40%) but down eight points from 2008.

Trends in Regular News Sources

PEW RESEARCH CENTER. 2012 News Consumption Survey Q41a, b, k, o, p. Q43a, b, d e. Q61, Q63, Q64. * Search engine use and general news online three or more days a week. All other trends based on those who "regularly" get news from source.

The proportion of Americans who get news online at least three days a week has leveled off, after a period of dramatic growth. Currently, 46% say they get news online or on a mobile phone or device at least three days a week, unchanged from 2010 (when the question only asked about getting news online). About a third (32%) of the public gets news online every day.

Profiles of Regular News Audiences

As the [2010 news consumption survey](#) found, there are substantial demographic and political differences among regular news audiences. In general, most audiences for individual news outlets are older than the public generally, but there are exceptions. Among 24 news outlets asked about on the survey, news comedy programs – the Daily Show and Colbert Report – attract the largest percentages of young people.

About four-in-ten regular viewers of The Colbert Report (43%) and the Daily Show (39%) are younger than 30. Among the general public, 23% are younger than 30. In contrast, audiences for cable talk shows skew much older than the public: 42% of regular Sean Hannity viewers are 65 and older, as are 40% of regular Bill O'Reilly viewers. Among the public, just 17% are 65 and older.

Business publications draw a heavily male audience: 73% of those who regularly read magazines such as the Economist and Bloomberg Businessweek are men, as are 71% of regular Wall Street Journal readers. Women comprise relatively large shares of the regular viewers of daytime talk shows, such as The View or Ellen DeGeneres (73%), and morning news shows (62%).

32 New York Times	28 Hardball	59 Rush Limbaugh	60 MSNBC
23 % of public	17 % of public	49 % of public	51 % of public

PEW RESEARCH CENTER 2012 News Consumption Survey.

The cable talk shows and news comedy programs continue to attract highly ideological audiences. Fully 78% of regular Sean Hannity viewers, and about seven-in-ten Rush Limbaugh listeners (71%) and Bill O'Reilly viewers (69%), are conservatives. Slightly more than a third of all Americans (35%) describe their political views as conservative.

Rachel Maddow is the only program whose audience is more than half liberal: 57% of regular Maddow viewers are liberals. Among regular Hardball watchers, 48% call themselves liberal. Additionally, about four-in-ten Daily Show (43%) and Colbert viewers (40%) are liberals. Among the public, just 22% say they are liberals.

SECTION 2: ONLINE AND DIGITAL NEWS

The percentage of Americans getting news from online and digital sources continues to grow, and that trend has been sustained in the last two years by an increase in the use of mobile devices.

The share saying they got news online yesterday is unchanged since 2010, at 34%. However, when those who get news from cell phones, tablets and other mobile devices are added, that figure grows to 39%. (The 2010 survey asked only about news online.)

The explosive growth of social networking sites has been another contributor to the online search for news, with the percentage saying they saw news or news headlines on social networking sites the previous day increasing from 9% in 2010 to 19%.

Many of the same trends also are evident in where people *regularly* get news. The percentage of Americans who regularly go online for news – those who get news online three days a week or more – has not increased. In the new survey, 46% say they get news online at least three days a week, which is unchanged since 2010.

However, the percentage who regularly get news on a cell phone, tablet or other mobile device has nearly doubled since 2010, from 9% to 15%, and the number regularly seeing news on social network sites has almost tripled, from 7% to 20%.

PEW RESEARCH CENTER 2012 News Consumption Survey.
* 2010 survey asked only about news online. 2012 also asked about news on cell phones, tablets and other mobile devices.

In the shifting online landscape, the use of mobile devices and social networking sites have replaced a traditional tool — search engines — as the driver of growth in finding news online. Search engines like Google, Bing or Yahoo continue to be the largest single tool in finding news online, but the substantial growth in their use between 2008 and 2010 has leveled off.

Other online platforms have had less impact than social networking sites. Just more than one-in-ten (12%) regularly get news from reading blogs, a figure that has changed little since 2008. About the same percentage (13%) regularly gets news by email. Just 5% say they regularly get news by listening to podcasts. And just 3% of the general public regularly follows news on Twitter.

Regular Online News Consumption

About half (46%) of the public says they get news online three days a week or more, with about a third (32%) going online for news every day. Neither figure has changed much since 2010; in 2008, 37% said they went online for news at least three days a week and 25% got news online daily.

There continue to be sizable age and educational differences in online news use. Nearly two-thirds of college graduates (65%) regularly get news online, compared with just 28% of those with no more than a high school education.

Only about one-in-five (22%) of those 65 and older get online news regularly, by far the lowest percentage of any age group.

Less Educated Americans Far Less Likely to Go Online for News

PEW RESEARCH CENTER 2012 News Consumption Survey. Q61. Whites and blacks include only those who are not Hispanic; Hispanics are of any race.

Online News Sources

There has been little change since 2010 in the websites people go to most for news and information. Yahoo, mentioned by 26% of online news users, is the top destination, as it was two years ago, while 17% name Google or Google News, 14% CNN, 13% local news sources and 11% MSN.

About one-in-ten online news users (9%) cite Fox as their top news destination. Nearly one-in-five Republicans (18%) name Fox as their top online news source, compared with 4% of Democrats and 8% of independents. By contrast, there are only slight partisan differences among those who mention MSNBC as the online source they use most often for news and information.

PEW RESEARCH CENTER 2012 News Consumption Survey. Q62. Open-ended question based on those who get online/digital news. Figures add to more than 100% because of multiple responses.

News Online, Mobile, Social Networks

In the current survey, 46% say they get news at least three days a week online or on a cell phone or mobile device; that is unchanged from 2010, when the question only asked about getting news online.

However, an increasing percentage says they get news on a cell phone, tablet or other mobile device. Currently, 15% say they regularly get news on one or more of these devices, up from 9% in 2010. In part, this is being driven by the increased internet availability on mobile devices. Two years ago, only about a third of the public (31%) said they accessed the internet on their cell phones. But today, more than half (55%) say they access the internet on a cell phone, tablet or another mobile device.

The percentage regularly getting news from a social networking site, such as Facebook, Google Plus or LinkedIn, also has increased dramatically – from just 2% in 2008, to 7% in 2010 and 20% currently.

These trends are complementary: Those who have smartphones – about half of the public (48%) – are far more likely to regularly see news or news headlines on social networking sites than those who do not (29% vs. 11%). Similarly, those who have iPads, Kindle Fires and other tablet computers (21% of the public) also are much more likely to get news from social networks than are those who do not own these devices.

Mobile, Social Networking Expand Reach as News Sources

PEW RESEARCH CENTER 2012 News Consumption Survey. Q61, Q67, Q75, Q82.

More Get News from Mobile Devices

An increasing proportion of Americans say they regularly get news on a cell phone, tablet or other mobile device. But this growth has been driven mostly by the greater availability of mobile internet access. Mobile internet users themselves are no more likely to regularly get news on these devices than they were two years ago.

Among the public, 15% regularly get news on a cell phone or another mobile handheld device, up from 9% two years ago. About three-in-ten (28%) mobile internet users say they regularly get news from one of these devices, which is virtually unchanged from 2010 (27%).

People younger than 50 are far more likely than older Americans to regularly get news on a mobile device. This primarily reflects the huge disparity in mobile internet access among younger and older Americans: 75% of those younger than 50 say they access the internet on cell phone, tablet or other mobile device. That compares with just 30% of those 50 and older. (For more on increased mobile internet use, see [“A Majority of Adult Cell Owners \[55%\] Now Go Online Using their Cell Phones.”](#) June 26, 2012, Pew Internet & American Life Project.)

Mobile News Consumption Increases

% who regularly get news on a cell phone, tablet, other mobile device ...	General public		Mobile internet users*

High school or less	4	9	17	20

PEW RESEARCH CENTER 2012 News Consumption Survey, Q67.

* 2012 based on those who access internet on cell phone, tablet or other device; 2010 based on those who use a cell phone to access the internet.

Mobile News Apps Also Increase

As news consumption on cell phones and other mobile devices has increased, so has the use of news apps, which allow people to access news and news headlines on their mobile devices. In the current survey, a quarter of all Americans, including 45% of mobile internet users, say they have ever downloaded a news app to their cell phone, tablet, or another mobile device. In 2010, 16% of the public, and only 20% of mobile internet users, said they had ever downloaded a news app.

Those who have downloaded news apps tend to be young, well-educated and wealthy. More than four-in-ten (43%) of those with family incomes of \$100,000 a year have ever downloaded a mobile news app; that compares with just 19% of those with incomes of \$30,000 a year or less. Even among mobile internet users, there are sizable income differences: Fully 60% of mobile internet users with incomes of at least \$100,000 have downloaded a news app, compared with 40% of those with incomes of \$30,000 or less.

Not surprisingly, those who have downloaded news apps are far more likely than other Americans to get news from digital sources. Fully 70% say they got news online or digitally yesterday. Yet they are not any less likely than others to get news from traditional sources.

More than half (54%) of those who have downloaded news apps say they watched

television news yesterday and 39% listened to radio news. Among all adults, 55% watched TV news and 33% listened to radio news. Comparable percentages of the public (29%) and those who have downloaded mobile news apps (30%) say they read a newspaper yesterday, but news app users are more likely to read the paper digitally and less likely to read a print version.

Many News App Users Still Get News from Traditional Sources

PEW RESEARCH CENTER 2012 News Consumption Survey. Q68.

News on Social Networking Sites

The use of social networking sites such as Facebook, Google Plus or LinkedIn to get news and headlines owes in part to the substantial increase in use of social media in general by Americans. About four-in-ten (41%) of all adults say they had used a social networking site on the previous day, up from 30% in 2010, according to the Pew Internet & American Life Project.

Yet those who go on social networking sites also are far more likely to see news on these sites. Overall, the percentage of all Americans who regularly get news from social network sites has roughly tripled – from 7% to 20% – since 2010. And the proportion of social networkers who regularly get news there has more than doubled, from 16% to 36%.

Young people, who use social network sites at much higher rates than do older adults, increasingly use Facebook and other social network sites to get news. About a third or more of those ages 18 to 39 regularly see news or news headlines on social networking sites. Two years ago, fewer than one-in-five in younger age groups said they regularly got news on social networking sites.

Social Network Sites Increasingly a News Source

<i>Regularly see news/news headlines on social networking sites ...</i>	General public		SNS users	
	2010	2012	2010	2012

High school or less	4	12	12	28

PEW RESEARCH CENTER 2012 News Consumption Survey. Q81. Whites and blacks include only those who are not Hispanic. Hispanics are of any race.

Twitter for News

Far more Americans go on social networking sites than Twitter. Just 13% of adults say they ever use Twitter or read Twitter messages. And Twitter users are less likely to get news from the site than are social network users.

Among the public, Twitter barely registers as a news source. Just 3% say they regularly get news on Twitter, while 4% sometimes get news there. Nonetheless, the percentage of Twitter users who get news on the site is growing. In the new survey, 27% say they get news regularly on Twitter while another 28% say they sometimes do this. In 2010, only 17% said they regularly got news on Twitter, while 15% said they sometimes got news on Twitter.

As is the case with social networks users, more Twitter users follow news on the site than use it to share news. About one-in-ten Twitter users (9%) regularly tweet or re-tweet news headlines; a similar percentage of social network users (10%) shares news on social network sites.

Twitter users appear to be more closely connected to professional journalists and news organizations than their social networking counterparts when it comes to relying on them for online news. More than a third (36%) of those with Twitter accounts use them to follow news organizations or journalists. On social networking sites, 19% of users say they got information there from news organizations or journalists.

For the most part, those who see political news on Twitter and social network sites prefer sources with no particular point of view. About

PEW RESEARCH CENTER 2012 News Consumption Survey. Q78, Q85. Based on those who use Twitter, social networks. Figures may not add to 100% because of rounding.

half of those who get news on Twitter (52%), and 56% of those who get news on social networks, say they prefer news sources that do not have a particular point of view. Just 26% of Twitter news users and 25% of those who get news from social networks would rather that these sources share their political point of view.

In this regard, the views of Twitter and social network users are similar to those of the general public. Most Americans (64%) say they would prefer to get news from sources that do not have a particular point of view, while 26% prefer news from sources that share their political view. (For the views of regular news audiences on this question, see Section 4: Demographics and Political Views of News Audiences.)

Getting News from Email

There has been no growth in the past two years in the percentage of Americans that gets or shares news by email. Currently, 13% say they regularly get news by email, while 14% say they sometimes do this. In 2010, 27% said they also regularly (12%) or sometimes (15%) got new or news headlines by email.

Only 4% say they regularly use email to send news or news headlines; 11% say they sometimes do this. This also is little changed from 2010, when 3% regularly sent news stories by email and 11% said they sometimes did this.

About one-in-ten Americans (12%) say they get news directly from news organizations by email. This figure also has shown little change since 2010 (10%).

PEW RESEARCH CENTER 2012 News Consumption Survey. Q69, Q72. Figures may not add to 100% because of rounding.

Searching for News Online

After a sharp increase from 2004 to 2010, the use of search engines like Google, Yahoo or Bing to find news has leveled off. After growing from 11% to 33% between 2004 and 2010, the number of adults who use search engines such as Google, Bing or Yahoo to search for news three or more days a week has steadied at 33%.

The same leveling-off of search engines also has occurred among regular online news users. Just over four-in-ten (42%) say they used search engines to find news three times a week or more. Prior to that, the number of online news users who frequently turned to search engines had jumped from 19% in 2004 to 44% in 2010.

There are few demographic differences when it comes to search engine use. As with other online news activity, older Americans and those with high school educations or less use search engines somewhat less than do younger people and college graduates.

Reading Political Blogs

Slightly more than one-in-ten (12%) of all Americans regularly read blogs about politics or current events and another 21% say they read them sometimes. Just less than half (45%) never read blogs or do not use the internet. The numbers of those who read blogs regularly are little changed since 2008.

There is little partisan difference when it comes to blog-reading: 14% of Republicans, 13% of Democrats and 10% of independents say they read blogs about politics and current events.

Among age groups, regular blog reading is lowest among those 18 to 24 (6%) and highest among those 40 to 49 (17%). There is little difference in blog reading among the age groups in between. Looked at by education level, 15% of college graduates and those who have had some college regularly read blogs, a number that falls to 7% for those with high school or less.

No Partisan Gap among Blog Readers

SECTION 3: NEWS ATTITUDES AND HABITS

Most Americans continue to say they enjoy following the news. But the percentage saying they enjoy it “a lot,” while little changed since 2010, is significantly lower today than it was four years ago.

Currently, 43% say they enjoy following the news a lot. That compares with 45% two years ago and 52% in 2008, 2006 and 2004.

Since 2008, there have been steep declines in the percentages of young people and liberal Democrats who say they enjoy following the news a lot.

Currently, just 24% of those younger than 30 say they enjoy following the news a lot, down 14 points from 2008. There has been less change among older age groups, who continue to be more likely to say they enjoy following the news a lot.

Far fewer liberal Democrats get a great deal of enjoyment from following the news than did so four years ago, during the previous presidential campaign. Just 45% of liberal Democrats say they enjoy following the news a lot; that is unchanged since 2010, but down sharply from 67% in 2008.

Half of conservative Republicans say they enjoy keeping up with the news a lot. That is down from 57% in 2010 and 56% in 2008. There has also been a decline in enjoyment of the news among independents, from 45% in 2008 and 43% in 2010, to 38% now.

Since 2008, Fewer Enjoy Following the News “A Lot”

Liberal Dem	67	45	45	-22

PEW RESEARCH CENTER 2012 News Consumption Survey. Q52. Figures may not add to 100% because of rounding.

As previous news consumption surveys have found, people who enjoy following the news tend to get more news from a variety of sources. Fully 71% of those who enjoy following the news a lot watched television news yesterday, compared with just 41% of those who get less enjoyment from keeping up. And newspaper reading is much higher among those who enjoy keeping up with the news a lot than among those who do not (44% vs. 17%).

People who enjoy following the news a lot also are more likely than those who enjoy it less to get news online (45% vs. 31%). But the difference is smaller in getting news from cell phones and other mobile devices. And those who get only some or little enjoyment from following the news are about as likely as those who enjoy it a lot to get news from social networks (20% vs. 24%).

About a quarter (26%) of those who get only some or little enjoyment from following the news did not get any news yesterday. That compares with just 5% of those who enjoy following the news a lot.

Most "Graze" for News

The availability of online and digital news has increased the ability of Americans to get news when they want. In 2010, those who check in on news from time to time, as opposed to getting it at regular times, became a clear majority. That remains the case today: 57% describe themselves as the type of person who checks in on the news from time to time compared to 37% who get news at regular times.

Those Who Enjoy Following News More Get More News

PEW RESEARCH CENTER 2012 News Consumption Survey. Q52.

*Got news from cell phone, tablet, other mobile device.

These news habits vary by age group. Nearly eight-in ten (79%) of those 18 to 29 graze the news during the day. Among those 30 to 49, 64% say their preference is to check in for news from time to time, a proportion that drops to 44% for those 50 to 64 and 33% for those 65 and older.

People who get news from TV or newspapers are more likely than those who get news from digital news platforms to get news at regular times. Nearly six-in-ten (57%) of those who read a newspaper yesterday and 49% of those who watched TV news say they get news at regular times. That compares with only about a third (35%) of those who got news online or digitally yesterday and 31% of those who saw news or news headlines on social networks.

Older Americans Still Get News on a Schedule; Young People “Graze”

Weather News Remains Top Draw

Despite major changes in the way Americans get news, the topics that interest people have changed very little over time. Weather continues to be the most popular news topic: 52% say they follow weather news very closely. No other type of news comes close.

About a quarter say they very closely track news about crime (28%), people and events in their community (26%) and sports (26%).

Other topics, including news about political figures and events in Washington (17%) and news about international affairs (14%) are less popular.

There are age differences in interest in news about number of subjects, particularly political figures and events in Washington: Just 5% of those younger than 30 follow this news very closely, the lowest of any age group. And only 43% of young people follow Washington news very or fairly closely; 57% say they follow it not too closely or not at all closely. Majorities in older age groups follow Washington news at least fairly closely.

PEW RESEARCH CENTER 2012 News Consumption Survey, Q100.

Interest in Local, National, International News

Majorities say they follow local (57%) and national news (54%) most of the time, whether or not something important is happening. But that is not the case when it comes to international news. Only about four-in-ten (39%) follow overseas news most of the time, compared with 56% who follow it only when something important is happening.

These views have changed little in recent years. But in 2004, 52% said they followed international news most of the time, whether or not something important was happening. That fell to 39% in 2006 and remained at that level in 2008 and in the current survey.

A Pew Research Center report in June found that news interest in individual foreign news stories to that point in 2012 had been lower than in 2011, when the Japanese earthquake and tsunami, the “Arab spring” and the killing of Osama bin Laden occurred. (See [“Interest in Foreign News Declines,”](#) June 6, 2012.)

Notably, there are large educational differences in the numbers following national news most of the time, but not international news. College graduates (69%) are far more likely than those with some college experience (53%) or those with a high school education or less (44%) to say they follow national news most of the time, regardless of whether something important is happening. But comparable percentages of all three groups say they follow international news most of the time (43% of college graduates, 40% of those with some college, 37% of those with no more than a high school education).

Most Want News with No Point of View

Nearly two-thirds (64%) of the public say they prefer getting political news from sources that don't have a particular point of view, compared with 26% who would rather get news from sources that share their political perspective. This is on par with opinions since 2006.

There continue to be sizable educational differences in opinions about political news with a point of view: 75% of college graduates, and 69% of those with some college experience say they prefer political news with no point of view. That compares with 53% of those with no more than a high school education.

Majorities across the political spectrum say they would rather get news with no particular point of view. Conservative Republicans are significantly more likely to express this view than they were in 2010 (58% now, 48% then).

There have been more modest changes in the views of other political groups.

PEW RESEARCH CENTER 2012 News Consumption Survey. Q55. Figures may not add to 100% because of rounding.

Most Americans also continue to reject the idea that the news media are all pretty much the same. More than half (55%) say there are few news sources they trust more than others; 42% say the news media are pretty much the same.

As in previous surveys, conservative Republicans and liberal Democrats are more likely than moderates and independents to say that there are a few news sources they trust more than others. About seven-in-ten conservative Republicans (73%) and liberal Democrats (70%) express this view, compared with about half of independents (52%), moderate and liberal Republicans (51%) and conservative and moderate Democrats (49%).

SECTION 4: DEMOGRAPHICS AND POLITICAL VIEWS OF NEWS AUDIENCES

In general, the regular audiences for most television and print news outlets tend to be older than the public as a whole. Yet there are some notable exceptions. As was the case two years ago, The Colbert Report and The Daily Show have the youngest audiences of the 24 news sources tested: 43% of Colbert's regular audience is younger than 30, as is 39% of the Daily Show's regular viewers. Just 23% of the public is 18-to-29.

Regular readers of the New York Times also tend to be younger than average. Nearly a third (32%) of regular Times readers – are younger than 30.

In contrast, political talk shows, particularly conservative talk programs, have older audiences. Large majorities of the regular viewers of Sean Hannity (66%) and The O'Reilly Factor (64%) are 50 and older. Just 43% of all Americans are 50 and older. And while just 17% of the public is 65 and older, 42% of regular Hannity viewers and 40% of regular O'Reilly viewers are in that age category.

Liberal talk show audiences also skew older, but not as dramatically. Still, among regular Hardball watchers, 59% are 50 or older, and 28% are at least 65. Among regular Rachel Maddow viewers, 57% are 50 or older and 25% are at least 65.

Audience Profiles: Young and Old News Audiences

PEW RESEARCH CENTER 2012 News Consumption Survey. Figures may not add to 100% because of rounding. Based on regular readers/viewers/listeners of each news source.

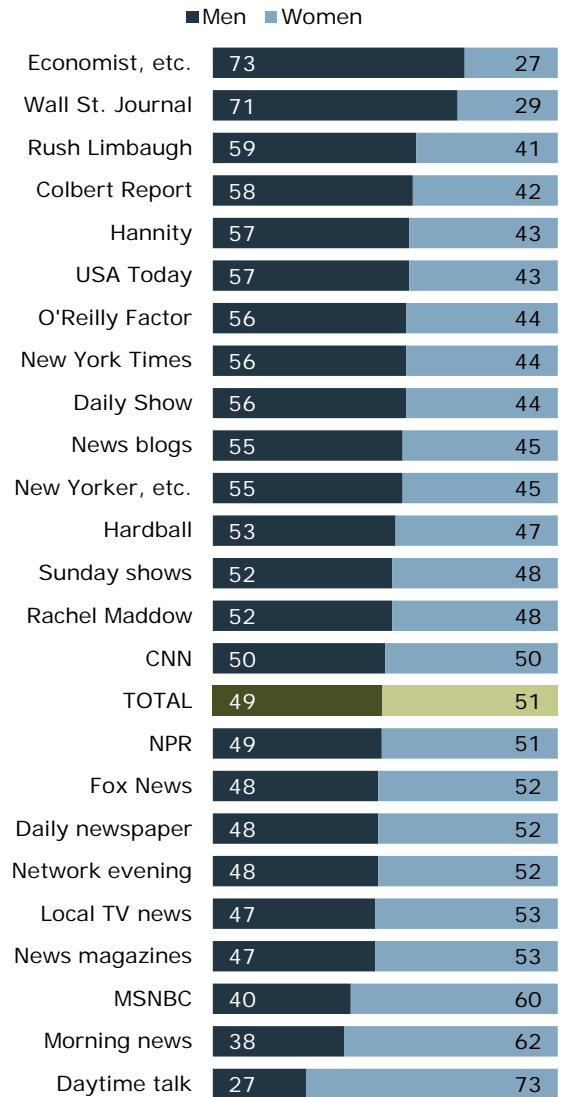

Men dominate the regular audiences of the financial publications included in the survey: 73% of the regular readers of the Economist and Bloomberg Businessweek are men as are 71% of regular Wall Street Journal readers.

Men also comprise smaller majorities of the regular audiences for several other news outlets, including Rush Limbaugh listeners (59%), viewers of Colbert (58%) and the Daily Show (56%), as well as regular viewers of Hannity (57%) and O'Reilly (56%).

In contrast, women make up nearly three-quarters (73%) of the regular audience for daytime talk shows, such as The View or the Ellen DeGeneres Show.

The regular viewers of MSNBC also are mostly women (62%). By comparison, the regular audiences for both CNN and Fox News are more evenly divided between women and men.

Economist, WSJ Readers Are Overwhelmingly Male

PEW RESEARCH CENTER 2012 News Consumption Survey. Figures may not add to 100% because of rounding. Based on regular readers/viewers/listeners of each news source.

Many regular news audiences have more education than the general public. And in general, regular readers of newspapers and magazines are more educated than the audiences of television shows or networks.

Nearly two-thirds (64%) of the regular readers of magazines such as the *New Yorker*, the *Atlantic* and *Harpers* are college graduates, as are 63% of readers of the *Economist* and *Bloomberg Businessweek*. More than half of the regular readers of the *Wall Street Journal* (56%), *New York Times* (56%) and news magazines (53%) also are college graduates. NPR's audience also is relatively well educated (54% are college graduates). Just 29% of all Americans are college graduates.

By comparison, 29% of CNN's regular audience, 26% of MSNBC's audience and 24% of Fox News's regular audience completed college.

Regular viewers of daytime talk shows are less educated than the public as a whole. Among this group, just 19% have four year degrees, 26% have attended some college and 54% have a high school diploma or less education.

Highly Educated: Regular New Yorker, Economist Readers

PEW RESEARCH CENTER 2012 News Consumption Survey. Figures may not add to 100% because of rounding; don't know not shown. Based on regular readers/viewers/listeners of each news source.

There is a similar pattern when it comes to the family incomes of regular news audiences. At least four-in-ten regular readers of magazines such as the Economist (46%) or the New Yorker (41%), as well as regular NPR listeners (43%), have family incomes of \$75,000 or more. Among the public, just 26% have family incomes of \$75,000 or more.

Other high earners include readers of the Wall Street Journal and New York Times—38% of each group has a family income of at least \$75,000—and Daily Show and Maddow viewers (37% each).

The income distribution of many audiences comes close to matching that of the general public, including audiences of show such as the O'Reilly Factor and Hardball, USA Today and network evening news. The income profiles of all three major cable news network audiences also closely track the general public.

Daytime talk show watchers stand out as the least well off regular audience. About half (51%) have family incomes of less than \$30,000, while three-in-ten have \$30,000-\$74,999 incomes. Just 12% have incomes of \$75,000 or more.

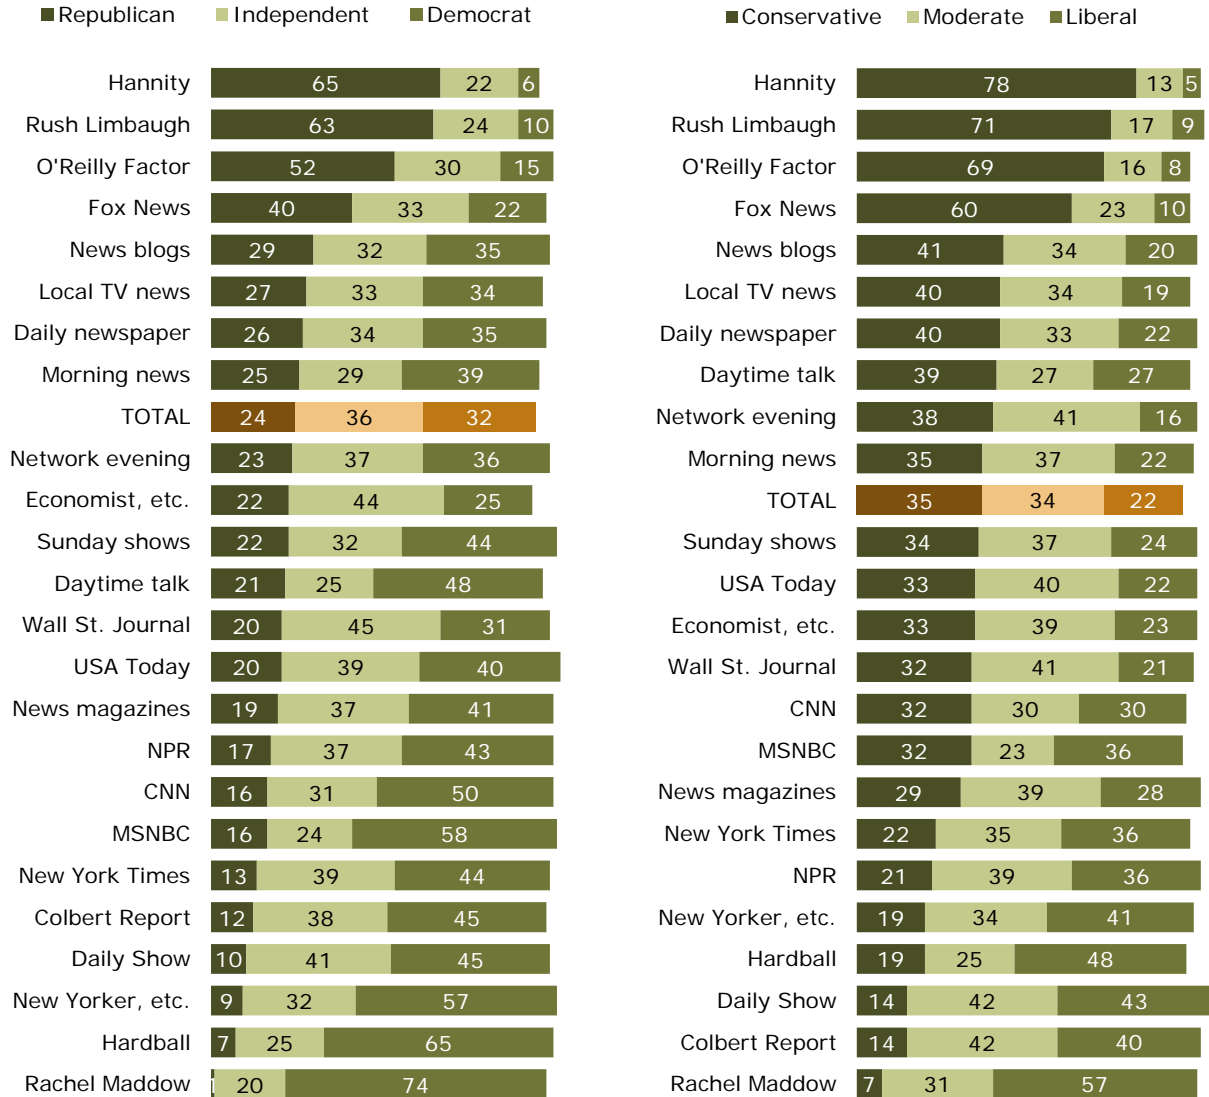

Income Profile of News Audiences

PEW RESEARCH CENTER 2012 News Consumption Survey. Figures may not add to 100% because of rounding; don't know not shown. Based on regular readers/viewers/listeners of each news source.

News Audiences' Political Views

Partisanship and Ideology of News Audiences

PEW RESEARCH CENTER 2012 News Consumption Survey. Figures may not add to 100% because of rounding; don't know not shown. Based on regular readers/viewers/listeners of each news source.

Since 2010, there has been little change in the ideological views or partisan leanings of news audiences. The regular audiences for Sean Hannity, Rush Limbaugh and Bill O'Reilly continue to be dominated by conservatives: About seven-in-ten or more of each of these audiences describe their political views as conservative, compared with 35% of the general public. And while Republicans comprise just 24% of the public, they make up half or more of the regular audiences of these three news outlets.

On the other hand, the regular viewers of Rachel Maddow are mostly liberal (57%); this is the only news audience tested in which liberals make up a majority. Just 22% of Americans are liberals. Liberals also make up 48% of regular viewers of Hardball, 43% of Daily Show viewers and 40% of Colbert viewers.

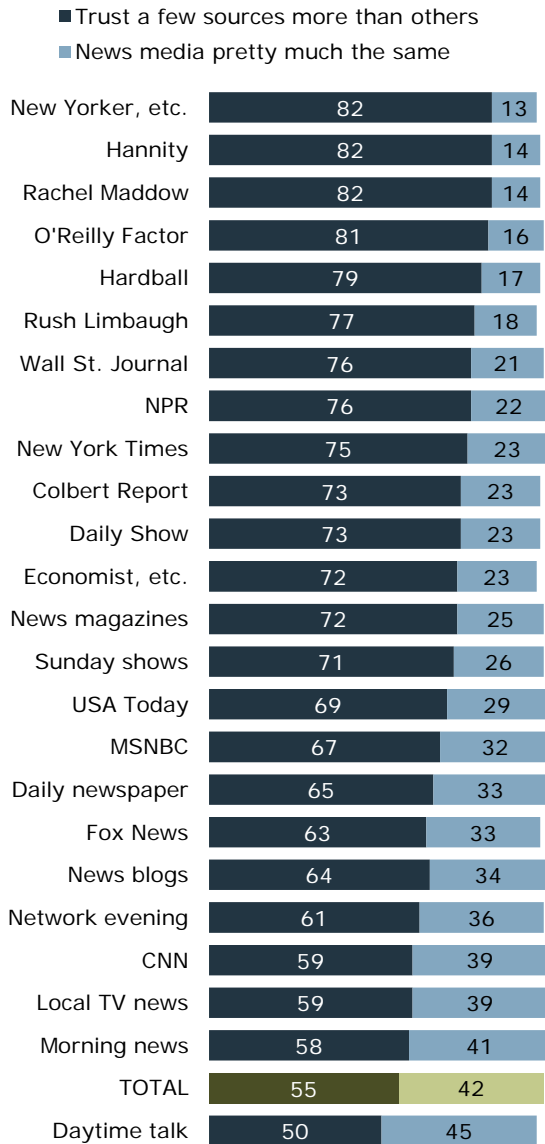

Majorities of the Maddow (74%) and Hardball audiences (65%) are Democrats, as are more than half of regular MSNBC viewers (58%) and regular readers of the New Yorker and similar magazines (57%). Among the public, just 32% are Democrats.

Yet the regular audiences for a number of news sources differ only modestly from the public ideologically or politically. Many of the most popular news sources—network evening news, daily newspapers and morning news, for example—have audiences whose partisan and ideological breakdowns are fairly similar to the public's. This also is the case for the regular audiences for Sunday morning news shows, business magazines, and both USA Today and the Wall Street Journal.

Attitudes about the News

Most Audiences Prefer News With No Political Point of View

% of regular audiences who ...

% who prefer news sources that ...

PEW RESEARCH CENTER 2012 News Consumption Survey Q54-55. Figures may not add to 100% because of rounding; don't know not shown. Based on regular readers/viewers/listeners of each news source.

A majority of Americans (55%) say they trust a few news sources more than others; fewer (42%) say the news media “are pretty much the same.” These opinions have changed very little since 2004. For the most part, regular news audiences are more likely than the public to say they trust a few news sources more than others.

Fully eight-in-ten readers of magazines such as the New Yorker, Atlantic and Harpers, and Hannity, Maddow and O’Reilly viewers say there are a few sources they trust more than others. By contrast, just half of regular viewers of daytime talk shows trust some news sources more than others; nearly as many (45%) say the media are pretty much the same.

A majority of the public (64%) also continues to prefer to get political news from sources that have no particular political point of view; just 26% prefer news from sources that share *their* political views. Majorities of most news audiences say they want news with no political point of view, including seven-in-ten or more Colbert and Daily Show viewers, Economist readers, NPR listeners and readers of the New Yorker and similar magazines.

However, only about four-in-ten viewers of Hardball (37%), Hannity (41%), Maddow (43%) and listeners of Limbaugh (44%) say they prefer to get news from sources that don’t have a particular political point of view.

Political Knowledge

The public was asked four questions to measure knowledge of political news and current events. The questions concern which party controls the House of Representatives, the current unemployment rate, the nation that Angela Merkel leads and which presidential candidate favors taxing higher-income Americans. Overall, just 14% of the public got all four questions right. Slightly more people (17%) got all four wrong. Most news audiences, however, scored substantially better than the public.

Almost four-in-ten of Rachel Maddow's audience (38%) answered the four questions correctly, as did 36% of readers of magazines such as the New Yorker and 34% of Wall Street Journal readers. Audiences for several other news outlets, including NPR (33% all four correct), the Daily Show (32%), Hardball (32%) and the New York Times (31%) fared nearly as well.

The daytime talk show audience fared poorly on the knowledge questions, with just 4% answering all four correctly. Among this group, 18% answered none of the questions correctly.

Slightly more than half the public (54%) knew that the Republican Party controls the House of Representatives. The percentage is down substantially from 2010, when 70% knew the Democrats controlled the House. This decline is reflected across most news audiences.

About half the public (52%) also knew that the national unemployment rate is about 8%. Almost all regular audiences were at least as

News Audiences' Knowledge of Current Events

PEW RESEARCH CENTER 2012 News Consumption Survey Q95-98. Figures may not add to 100% because of rounding. Based on regular readers/viewers/listeners of each news source.

likely as the general public to get this question right.

Just 22% of the public identified Germany as the country that Angela Merkel leads. Many audiences fared somewhat better on this question than the public as a whole, but most regular readers, viewers and listeners did not know this or offered no response.

Two-thirds of the public knew that Barack Obama—not Mitt Romney—is more supportive of increasing taxes on higher-income people. Majorities of all news audiences answered this question correctly.

About the Media Consumption Survey Data

The media consumption report draws on a series of large national surveys conducted since 1994. The project was initiated by the Times Mirror Center for the People & the Press in 1994 and continued by the Pew Research Center for the People & the Press since 1996. Over this period, 10 surveys have been conducted, yielding more than 30,000 interviews. All media consumption surveys have been conducted by telephone. Since 2006, cell phone interviewing has been included.

From 1994-2010, interviews were conducted in English only; Spanish language interviewing was added in 2012. Most questions in 2012 were asked of all respondents, but questions about regular media consumption were not asked of those interviewed in Spanish who said they did not consume any media in English.

Year	Field Dates	Sample Size	Margin of Error
1994	January 4-February 17, 1994	3,667	2
1996	April 19-25, 1996	1,751	3
1998	April 24-May 11, 1998	3,002	2.5
2000	April 20-May 13, 2000	3,142	2.5
2002	April 19-May 12, 2002	3,002	2
2004	April 19-May 12, 2004	3,000	2
2006	April 27-May 22, 2006	3,204	2
2008	April 30-June 1, 2008	3,615	2
2010	June 8-28, 2010	3,006	2.5
2012	May 9-June 3, 2012	3,003	2.1

Results for the 2012 media consumption survey are based on telephone interviews conducted May 9-June 3, 2012, among a national sample of 3,003 adults, 18 years of age or older, living in all 50 U.S. states and the District of Columbia (1,801 respondents were interviewed on a landline telephone, and 1,202 were interviewed on a cell phone, including 591 who had no landline telephone). The survey was conducted by interviewers at Princeton Data Source under the direction of Princeton Survey Research Associates International.

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the 2012 survey:

Group	Unweighted sample size	Plus or minus ...
Total sample	3,003	2.1 percentage points
18-29	465	5.3 percentage points
30-49	769	4.1 percentage points
50-64	875	3.9 percentage points
65+	832	4.0 percentage points
Republicans	823	4.0 percentage points
Democrats	961	3.7 percentage points
Independents	1,006	3.6 percentage points
Internet users	2,565	2.3 percentage points
Mobile internet users	1,454	3.0 percentage points
Social network users	1,512	2.9 percentage points
Twitter users	324	6.3 percentage points

Sample sizes and sampling error for other subgroups are available upon request. In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

Figures in this report may not add to 100% because of rounding. Whites and blacks are non-Hispanic; Hispanics may be of any race.

Survey Methodology in Detail

Sample Design

A combination of landline and cell phone random digit dial samples were used; both samples were provided by Survey Sampling International. Landline and cell phone numbers were sampled to yield a ratio of approximately three completed landline interviews to two cell phone interviews.

The design of the landline sample ensures representation of both listed and unlisted numbers (including those not yet listed) by using random digit dialing. This method uses random generation of the last two digits of telephone numbers selected on the basis of the area code, telephone exchange, and bank number. A bank is defined as 100 contiguous telephone numbers, for example 800-555-1200 to 800-555-1299. The telephone exchanges are selected to be proportionally stratified by county and by telephone exchange within the county. That is, the number of telephone numbers randomly sampled from within a given county is proportional to that county's share of telephone numbers in the U.S. Only banks of telephone numbers containing three or more listed residential numbers are selected.

The cell phone sample is drawn through systematic sampling from dedicated wireless banks of 100 contiguous numbers and shared service banks with no directory-listed landline numbers (to ensure that the cell phone sample does not include banks that are also included in the landline sample). The sample is designed to be representative both geographically and by large and small wireless carriers.

Both the landline and cell samples are released for interviewing in replicates, which are small random samples of each larger sample. Using replicates to control the release of telephone numbers ensures that the complete call procedures are followed for all numbers dialed. The use of replicates also improves the overall representativeness of the survey by helping to ensure that the regional distribution of numbers called is appropriate.

Respondent Selection

Respondents in the landline sample were selected by randomly asking for the youngest male or female, 18 years of age or older who is now at home (for half of the households interviewers ask to speak with the youngest male first and for the other half the youngest female). If there is no eligible person of the requested gender at home, interviewers ask to speak with the youngest adult of the opposite gender, who is now at home. This method of selecting respondents within each household improves participation among young people who are often more difficult to interview than older people because of their lifestyles, but this method is not a random sampling of members of the household.

Unlike a landline phone, a cell phone is assumed in Pew Research polls to be a personal device. Interviewers ask if the person who answers the cell phone is 18 years of age or older to determine if the person is eligible to complete the survey; interviewers also confirm that the person is not driving and is in a safe place. For those in the cell sample, no effort is made to give other household members a chance to be interviewed. Although some people share cell phones, it is still uncertain whether the benefits of sampling among the users of a shared cell phone outweigh the disadvantages.

Interviewing

Interviewing was conducted at Princeton Data Source under the direction of Princeton Survey Research Associates International. Interviews were conducted in English and Spanish. As many as seven attempts were made to complete an interview at every sampled landline and cell phone number. Calls were staggered over times of day and days of the week (including at least one daytime call) to maximize the chances of making contact with a potential respondent. Interviewing was also spread as evenly as possible across the field period. An effort was made to recontact most interview breakoffs and refusals to attempt to convert them to completed interviews. People reached on cell phones were offered \$5 compensation for the minutes used to complete the survey on their cell phone.

Response rates for Pew Research polls typically range from 5% to 15%; these response rates are comparable to those for other major opinion polls. The response rate is the percentage of known or assumed residential households for which a completed interview was obtained. The response rate we report is the American Association for Public Opinion Research's Response Rate 3 (RR3) as outlined in their [Standard Definitions](#). Fortunately, low response rates are not necessarily an indication of nonresponse bias. In addition to the response rate, we sometimes report the contact rate, cooperation rate, or completion rate for a survey. The contact rate is the proportion of working numbers where a request for an interview was made. The cooperation rate is the proportion of contacted numbers where someone gave initial consent to be interviewed. The completion rate is the proportion of initially cooperating and eligible households where someone completed the interview.

Weighting

First, people with landlines are weighted by household size to account for the fact that people in larger households have a lower probability of being selected. In addition, the combined landline and cell phone sample is weighted to adjust for the overlap of the landline and cell frames (since people with both a landline and cell phone have a greater probability of being included in the sample), including the size of the completed sample from each frame and the estimated ratio of the size of the landline frame to the cell phone frame.

The sample is then weighted to population parameters using an iterative technique that matches gender, age, education, race, Hispanic origin and nativity, region, population density and telephone status and usage. The population parameters for age, education, race/ethnicity, and region are from the Current Population Survey's March 2011 Annual Social and Economic Supplement and the parameter for population density is from the Decennial Census. The parameter for telephone status and relative usage (of landline phone to cell phone for those with both) is based on extrapolations from the 2011 National Health Interview Survey. The specific weighting parameters are: gender by age, gender by education, age by education, race/ethnicity (including Hispanic origin and nativity), region, density and telephone status and usage; non-Hispanic whites are also balanced on age, education and region. The weighting procedure simultaneously balances the distributions of all weighting parameters at once. The final weights are trimmed to prevent individual cases from having too much influence on the final results.

Weighting cannot eliminate every source of nonresponse bias. Nonetheless, properly-conducted public opinion polls have a good record in achieving unbiased samples. In particular, election polling - where a comparison of the polls with the actual election results provides an opportunity to validate the survey results - has been very accurate over the years.

Sampling Error

Sampling error results from collecting data from some, rather than all, members of the population. The 2012 survey of 3,003 adults had a margin of error of plus or minus 2.1 percentage points with a 95%

confidence interval. This means that in 95 out of every 100 samples of the same size and type, the results we obtain would vary by no more than plus or minus 2.1 percentage points from the result we would get if we could interview every member of the population. Thus, the chances are very high (95 out of 100) that any sample we draw will be within 2.1 points of the true population value. The margins of error reported and statistical tests of significance are adjusted to account for the survey's design effect, a measure of how much efficiency is lost in the sample design and weighting procedures when compared with a simple random sample.

Q.34 How much do you enjoy reading... A lot, some, not much, or not at all?

May 9-Jun 3		Apr	Apr	Jun	Feb
<u>2012</u>		<u>2006</u>	<u>2004</u>	<u>1995</u>	<u>1994</u>
51	A lot	53	53	53	53
29	Some	31	31	32	32
12	Not much	11	10	10	10
8	Not at all	5	5	4	4
1	Don't know/Refused (VOL.)	0	1	1	1

⁹ Interviewer instruction regarding holy books was added to questions 23 and 24 in June 2010.

ASK IF INTERVIEW IS CONDUCTED IN SPANISH (LANG=2):

Q.35 Thinking about what you watch on TV, listen to on the radio and read in newspapers... Overall, how much, if any, is in English? **[READ IN ORDER:]**

BASED ON RESPONDENTS INTERVIEWED IN SPANISH [N=122]:

May 9-Jun 3

2012

17	A lot
50	A little
32	None at all
0	Don't know/Refused (VOL.)

ASK IF INTERVIEW IS CONDUCTED IN ENGLISH (LANG=1):

Q.36 Thinking about what you watch on TV, listen to on the radio and read in newspapers... Overall, how much, if any, is in a language other than English? A lot, a little or none at all?

BASED ON RESPONDENTS INTERVIEWED IN ENGLISH [N=2881]:

May 9-Jun 3

2012

6	A lot
15	A little
78	None at all
1	Don't know/Refused (VOL.)

ASK IF INTERVIEW IS CONDUCTED IN ENGLISH (LANG=1):

Q.36 Thinking about what you watch on TV, listen to on the radio and read in newspapers... Overall, how much, if any, is in a language other than English? A lot, a little or none at all?

ASK IF GET A LOT OR A LITTLE MEDIA IN A LANGUAGE OTHER THAN ENGLISH (Q.36=1,2):

Q.36a Is any of that in Spanish, or not?

BASED ON RESPONDENTS INTERVIEWED IN ENGLISH [N=2881]:

May 9-Jun 3

2012

22	Get a lot/a little media in language other than English
12	Yes, any in Spanish
10	No, none in Spanish
*	Don't know/Refused (VOL.)
78	None at all in language other than English
1	Don't know/Refused (VOL.)

ASK FORM 2 ONLY [N=1507]:

Q.37 As I read from a list tell me if you did this yesterday or not. Yesterday did you... **[INSERT ITEM, RANDOMIZE?]** (Yesterday, did you... **[NEXT ITEM?]**)

	<u>Yes</u>	<u>No</u>	(VOL.) Does not <u>apply</u>	(VOL.) <u>DK/Ref</u>
a.F2 Get some kind of vigorous exercise such as running, playing a sport or working out at a gym

ASK ALL FORM 1 [N=1496]:**RANDOMIZE SUBJECT OF QUESTIONS 101 THROUGH 103, KEEPING QUESTION WORDING IN ORDER:**

Q.101 Which of the following two statements best describes you: "I follow INTERNATIONAL news closely ONLY when something important is happening" OR "I follow INTERNATIONAL news closely most of the time, whether or not something important is happening"?⁴⁷

May 9-Jun 3 2012		Apr 2008	Apr 2006	Apr 2004	Apr 2002	Apr 2000	Apr 1998
56	Only when something important is happening	56	58	47	61	64	63
39	Most of the time, whether or not something important is happening	39	39	52	37	33	34
5	Don't know/Refused (VOL.)	5	3	1	2	3	3

ASK ALL FORM 1 [N=1496]:**RANDOMIZE SUBJECT OF QUESTIONS 101 THROUGH 103, KEEPING QUESTION WORDING IN ORDER:**

Q.102 I'd like to ask the same question, but about NATIONAL news...Which best describes you: "I follow NATIONAL news closely ONLY when something important is happening" OR "I follow NATIONAL news closely most of the time, whether or not something important is happening"?

May 9-Jun 3 2012		Apr 2008	Apr 2006	Apr 2004	Apr 2002	Apr 2000	Apr 1998
44	Only when something important is happening	41	43	43	45	50	46
54	Most of the time, whether or not something important is happening	55	55	55	53	48	52
3	Don't know/Refused (VOL.)	4	2	2	2	2	2

ASK ALL FORM 1 [N=1496]:**RANDOMIZE SUBJECT OF QUESTIONS 101 THROUGH 103, KEEPING QUESTION WORDING IN ORDER:**

Q.103 And just once more about LOCAL COMMUNITY news...Which best describes you: "I follow LOCAL COMMUNITY news closely ONLY when something important is happening" OR "I follow LOCAL COMMUNITY news closely most of the time, whether or not something important is happening"?

May 9-Jun 3 2012		Apr 2008	Apr 2006	Apr 2004	Apr 2002	Apr 2000	Apr 1998
39	Only when something important is happening	40	41	43	41	40	38
57	Most of the time, whether or not something important is happening	57	57	55	56	58	61
4	Don't know/Refused (VOL.)	3	2	2	3	2	1

⁴⁷ In April 2002 and earlier, the Q.101-Q.103 series included the words "something important or interesting is happening." Also, in April 2002 and earlier, the questions were rotated and did not include the transitions presented here.

ASK ALL:

PARTY In politics TODAY, do you consider yourself a Republican, Democrat, or independent?

ASK IF INDEP/NO PREF/OTHER/DK/REF (PARTY=3,4,5,9):

PARTYLN As of today do you lean more to the Republican Party or more to the Democratic Party?

⁴⁸ In the February 2-7, 2011 survey and before, question read "...do you strongly agree, agree, disagree or strongly disagree with the Tea Party movement..." In October 2010 and earlier, question was asked only of those who had heard or read a lot or a little about the Tea Party. In May 2010 through October 2010, it was described as: "the Tea Party movement that has been involved in campaigns and protests in the U.S. over the past year." In March 2010 it was described as "the Tea Party protests that have taken place in the U.S. over the past year."
